Professional Summary

B.Tech ECE student at ZHCET, AMU, focused on backend development with Java and Spring Boot. Built and deployed secure REST APIs (Spring Security, JWT) and a real-time chat system (WebSocket/STOMP) backed by PostgreSQL, with unit tests in JUnit and Mockito. Solved 350+ LeetCode problems with a 1500+ contest rating.

Education

B.Tech - Electronics Communication and Engineering (ECE) — ZHCET (AMU), India
CPI: 8.2 — *2024 – 2028*

Technical Skills

Languages: Java, SQL
Backend: Spring Boot, Spring Security, Spring Data JPA (Hibernate), REST APIs, JWT Authentication, WebSocket (STOMP)
Testing: JUnit 5, Mockito, Postman
Databases: PostgreSQL, MySQL
Tools & DevOps: Git, GitHub, Docker, IntelliJ IDEA, VS Code
Core Concepts: Data Structures and Algorithms, OOP, DBMS, Operating Systems, Computer Networks

Projects

CampusConnect | *Java, Spring Boot, Spring Security, JWT, Hibernate, PostgreSQL, Docker, JUnit, Mockito* | GitHub

- Built a student portal for complaint management and event handling, with secure REST APIs and role-based access for students and administrators.
- Implemented stateless JWT authentication with Spring Security, storing the token in an HTTP-only cookie so it cannot be read by JavaScript.
- Added DTO-based request validation and a global exception handler so every endpoint returns clear, consistent error responses.
- Designed normalized relational schemas and entity mappings with Spring Data JPA and PostgreSQL, using a layered architecture (controller, service, repository, DTO) for separation of concerns.
- Wrote unit tests for the service layer using JUnit 5 and Mockito, isolating business logic from the database through mocked repositories.
- Containerized the application with Docker and deployed it on Render with a managed PostgreSQL database on Neon, keeping database and security credentials in environment variables.

Aura | *Java, Spring Boot, Spring WebSocket (STOMP), Spring Data JPA, PostgreSQL* | GitHub

- Built a real-time chat application using Spring WebSocket and STOMP, enabling bidirectional messaging with instant delivery to all clients connected to a room.
- Designed an event-driven messaging flow on Spring's message broker, routing client messages through `/app` destinations and broadcasting to subscribers through `/topic` destinations.
- Implemented room-based conversations with persistent chat history in PostgreSQL via Spring Data JPA, keeping real-time delivery decoupled from database persistence.
- Developed live user presence and typing indicators by handling WebSocket connect, disconnect, and message events across the connection lifecycle.
- Separated transient presence events (join/leave, typing) from persisted chat messages, so only real messages are written to PostgreSQL and chat history stays clean.

Achievements & Certifications

LeetCode: 1500+ contest rating and 350+ problems solved across Arrays, Strings, Linked Lists, Stacks, Queues, Hashing, Recursion, Binary Search, Trees, and Dynamic Programming.

Certification: Certificate of Excellence — Spring Boot Development Course, Scaler
